# SOLUTIONS FOR ENTERPRISE

## The PBC Difference

PBC DataCom is a Value-Added Reseller/Installer, specializing in Information and Communications Technology Infrastructure, offering turnkey Integrated Smart Building Solutions for Enterprise. We provide products and services that assist with the planning, design, installation, and integration of business technology systems.

Our vision is to minimize the impact of buildings on the environment, by constructing sustainable facilities that reduce energy consumption, save costs, and improve workplace health and safety.

As technology and customer expectations evolve, efficiencies and transparencies become more important. Our team of continuously educated engineers and trained technicians bring a highly motivated and passionate delivery to each project. Your network is critical to business and it's communications. You need a solution that provides speed, connectivity and ultimately value to your business. Your network needs to help you overcome business challenges and problems, not become a problem itself. We help facilitate

the transformation of traditional buildings into smart buildings that generate returns on intelligence.

Smart Buildings and Cities will be powered by devices and sensors, and all of these will need to transmit data over the network. Is your building infrastructure ready?

---

*"PBC is here to do the heavy lifting, so you can get back to business."*

# PARTNER NETWORK

We've partnered with some of the best in the industry

## ABOUT US

We were founded in by Ryan Moore, in Houston Texas on the knowledge and beliefs that when you pair smart preparation and hard work you get a job well done.

Ryan has a demonstrated professional background, including 15 years experience in Information Technology. As a Senior Engineer, Ryan specialized in System/Network Design and Deployments where he noticed some interesting industry pain points.

Currently every solution needs to be installed, managed, and maintained differently by system integrators. Our clients benefit from the convenience and cost savings of an end-to-end service provider, avoiding cross vendors, lack of knowledge, and unreliable sub-contractors.

Our goal is to be a trusted single - source provider and build lasting relationships with consistent quality results and transparency at every step of the way.

### Our Mission

We strive to bridge the gap between construction, operations, and technology as the trusted single-source provider across all components of IoT digital transformation:

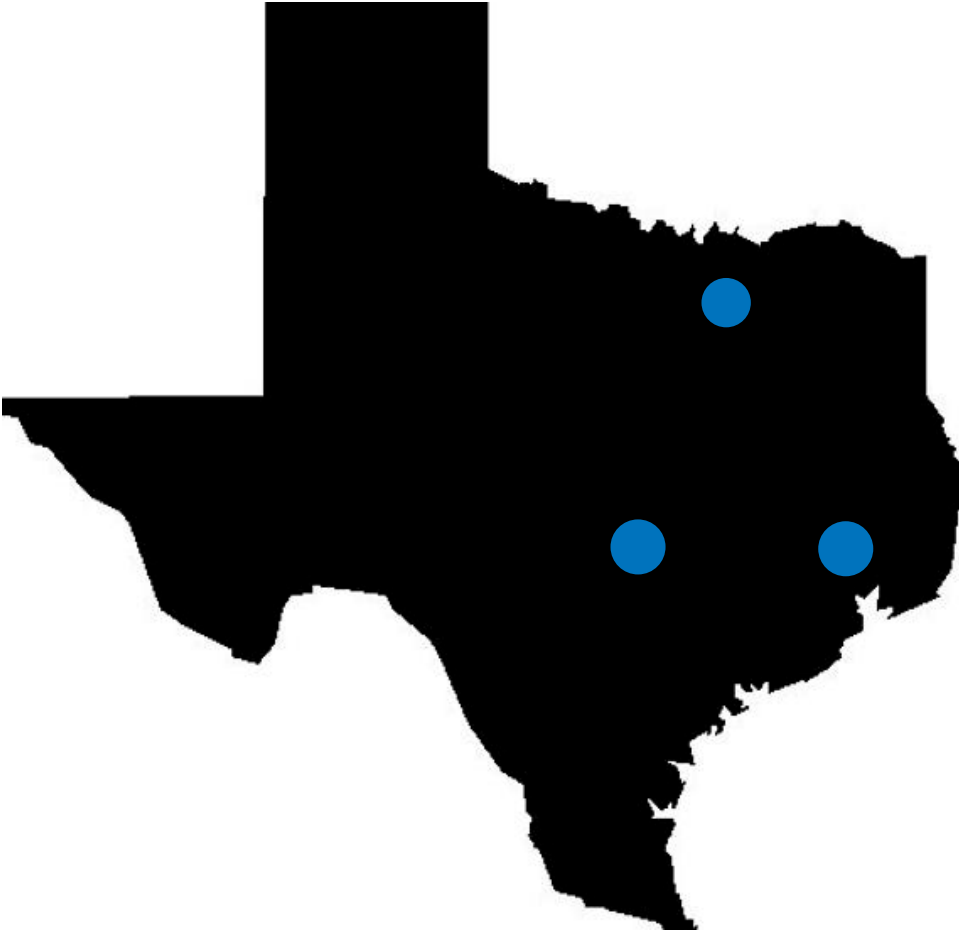

Connectivity (Infrastructure)

Devices (Hardware)

Platform (Software)

Solutions & Services

*We strive to provide the best installation, as efficiently as possible, every time.*

▶ Founded by SHSU Alumni

▶ Based in Houston Texas

▶ BBB Accredited

# PROUDLY SERVING TEXAS

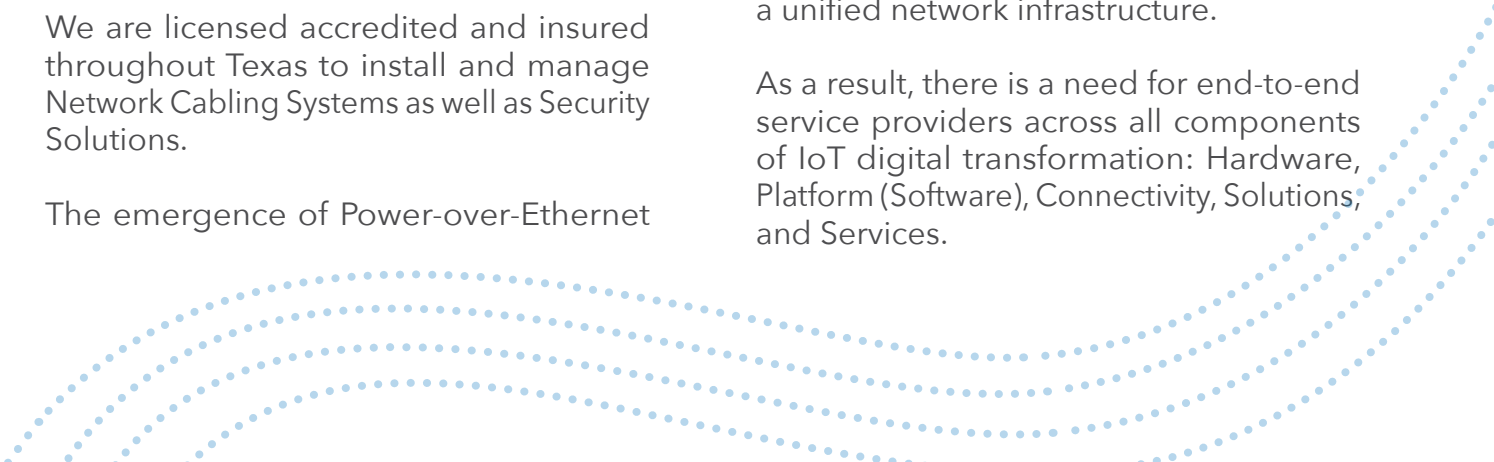

We offer services throughout the great Lone Star state

We are licensed accredited and insured throughout Texas to install and manage Network Cabling Systems as well as Security Solutions.

The emergence of Power-over-Ethernet

technology and machine-to-machine connectivity is increasing the need for reliable structured cabling that can support a unified network infrastructure.

As a result, there is a need for end-to-end service providers across all components of IoT digital transformation: Hardware, Platform (Software), Connectivity, Solutions, and Services.

# POWERING BUSINESS CONNECTIVITY

As engineers and trained professionals, we take pride in being able to provide accurate estimates on a job's cost as well as project timelines. We strive to ensure no surprises arise at the end of the project.

We utilize our industry expertise to create new and transform outdated infrastructure. Providing services that assist with planning, designing, installation, and integration of business technology systems. Our clients are saving time and money with integrated solutions that are scalable and easy to manage, across IT and Non-IT components.

## Networks

With technology rapidly evolving there is an increased demand on bandwidth and data across the network. Can your current network keep up with increased devices and more data being communicated?

When you're ready to upgrade your building, from distribution to installation, we can help you plan and deploy the best networking solution for you.

## Security

Today, you need to be able to see what's going on at your business at all times. Protect your investment with smarter surveillance solutions. With hybrid cloud technology there are no trade-offs in reliability and flexibility. We provide the planning and installation of enterprise security cameras for indoor and outdoor applications.

### Smart Building IoT

Buildings are evolving with the help of the technology. Intelligent Access Control, Smart Cameras, Air Sensors and Automation control are all realities thanks to IoT. Network infrastructure ties everything together and we have the partnerships and expertise to help take your building to the next level.

### Access Control

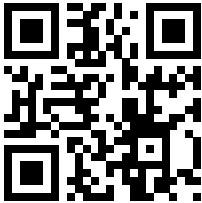

Access control is used to identify an individual who does a specific job, authenticate them, and then proceed to give that individual only the key to the door or workstation that they need access to and nothing more.

We offer an Access Control Solutions that is cloud based and seamlessly integrates with powerful video security. Manage doors, users and schedules across your entire organization.

Our vision is to minimize the impact of buildings on the environment, by constructing sustainable facilities that reduce energy consumption, save costs, and improve workplace health and safety.
